

# FITpac

Mast Group is pleased to introduce **FITpac**, the patient friendly logistical solution for implementing quantitative FIT with the OC-Sensor™.

UK laboratories are already in the process of establishing FIT, but with confusion over pathway guidance, variation in local pathology infrastructure, specimen request processes and IT limitations, creation of a logistical solution to distribute and return samples is often under appreciated.

Building upon more than a decade of experience in the design and creation of FIT patient packs for asymptomatic screening programs across Europe, Mast is now able to offer a customised solution for symptomatic patients.

Your **FITpac** can be customised from individual components (including the OC-Sensor Auto-3 sample collection bottle, bespoke instruction sheets, special faeces collection paper and return envelopes) and supplied 'ready to use'.

- Mast has solutions for sample return via post or GP pathology collection to your local laboratory. By working with you to understand your local requirements and infrastructure, Mast can design a **FITpac** solution for your specific needs.
- **FITpac** is the proven logistical solution.
- **FITpac** will increase patient compliance through user friendly instructions, avoiding complications and delays from repeat sampling.
- **FITpac** is provided 'ready to use': saving time and money in the laboratory.

Speak to your Technical Sales Representative for more information about **FITpac**.
